Monthly Baseline Production for the duration of FY 2022 – 23 to FY 2037-38 for the contract area to be filled in the table

1. Since the monthly baseline production is provided, the actual total production can be used to compute the monthly incremental production and therefore the fees payable
2. In case the contract starts or ends during the middle of a month, then the monthly production will be prorated for the number of applicable days i.e. $\text{Monthly Baseline} / \text{Number of Days in the Month} * \text{Number of Applicable Days in the Month}$. For avoidance of doubt, in case of a leap year, number of days in the month of February shall be considered as Twenty-nine (29).
3. Number of applicable days in the month is computed as follows:

- **If (contract effective date falls in the month):** Number of applicable days in the month = Difference between Number of days in the month and Contract effective date plus 1
- **If (contract effective date doesn't fall in the month & contract end date doesn't fall in the month):** Number of applicable days in the month = Number of days in the month
- **If (contract end date falls in the month):** Number of applicable days in the month = Number of days in the month till the contract end date.
